Soundboards

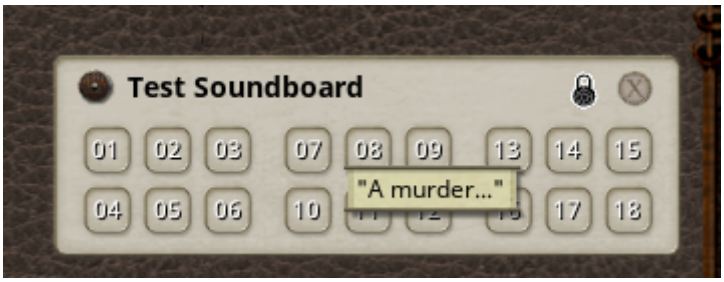

Soundboards add a quick and easy way to prepare sounds for playback. Each soundboard can link up to 18 sounds. The Soundboards window can be accessed from the Syrinscape Window.

When Unlocked for editing, a sound board will show 18 record links. Sounds may be added to the soundboard by dragging the record link to the soundboard.

When the Soundboard is complete and locked, it will no longer display the sounds. The window will change to show 18 numbered buttons instead. When each button is pressed, the linked sound will immediately begin playback. When the mouse is hovered over a sound button, the popup text will show the name of the sound record linked at that location.
