Instructions

Weather Generator Instructions

The weather generator is accessible to the GM from the Party Sheet by selecting the Weather tab.

The screenshot shows a 'PARTY SHEET' window with a sidebar on the right containing tabs: Main, Inventory, Other, and Weather. The Weather tab is selected and highlighted with a red rectangle. The main area of the window is divided into sections. The top section is 'Location Name' with a text box containing 'Gold Coast'. Below this is the 'Initial Conditions' section, which contains several dropdown menus: 'Region' (Arctic), 'Season' (Mid Winter), 'Time of Day' (Midnight), 'Precipitation' (Heavy), and 'Wind' (No Wind). There is also a 'Temperature' field with the value '35' and a unit selector set to '°F'. Below the initial conditions are four buttons: '# Days' (set to 1), 'Generate', 'Generate Next', 'Reset', and 'Output to Story'. At the bottom of the window is a table with the following headers: Day, Time, Precipitation, Wind, Temperature, °F, °C, and Special?. The table body is currently empty.

Setting Parameters

The weather generator allows you to set the Location Name, and the Initial Conditions for generation. The parameters you can select are Region, Season, Precipitation, Wind, Temperature and Time of Day. Other than Temperature, the values you can select are not editable at this time. A future update may allow for more customization of the weather generation options.

Generating Weather

Once the parameters are set, you can select the number of days to generate, 1-10. Clicking the Generate button will generate weather using the values selected in the Initial conditions, and proceeding through the various times of day. The first weather event generated is done using the supplied initial conditions, and all subsequent weather is generated using the previously generated value. In other words, each weather event is based on the values previously generated.

Output

The weather can be output in one of two ways. The "Output to Story" button creates a new story entry with the current generated weather listed as a table.

Weather Forecast: Gold Coast 1 Day(s)

Location: **Gold Coast**
 Region: **Arctic**
 Season: **Mid Winter**

Day	Time	Precipitation	Wind	Temperature	°F	°C	Special?
1	Night	Light	Low Winds	Freezing	5	-15	
1	Dawn	Heavy	Low Winds	Freezing	6	-14	
1	Midday	Heavy	Low Winds	Freezing	3	-16	
1	Afternoon	Light	No Wind	Extreme Cold	-10	-23	
1	Evening	Heavy	Low Winds	Extreme Cold	-11	-24	
1	Midnight	Heavy	High Winds	Extreme Cold	-9	-23	BLIZZARD!

Each weather entry also has an Output to Chat button on the far left. Pressing the Output to Chat button will output that weather event to the chat, visible to the GM only.
